Non - Adhesive Stencils - For use with new concrete installations. Once the stencil is placed on the concrete, the overlay texture is applied over the entire surface and floated. Release agents and textures are applied at this point. Once the stencil is removed and the surface has been cleaned, you can then apply your sealer.

Adhesive backed Stencils - All existing concrete must be cleaned thoroughly to remove any existing residue before the adhesive stencil is applied. Apply your overlay either using a hopper gun or a troweled finish. The adhesive stencil is removed before the area hardens. Once the surface has been cleaned, the sealer is applied. Note: This is just a general guideline. Make sure to follow the manufacture instructions for all Decorative Concrete Products.
